SOFTWARE-TRAINEE

- **Project Name :-** SAMAJ
- **Project Description :-** Samaj is a web application built using React.js that serves as a community management platform. It includes role-based access control, allowing a super admin to create and manage admins and tenants. The platform enables tenants to organize their information, including parent-child relationships, and facilitates event management with the ability to create and display events.
- **Technologies Used :-** React.js , HTML , Typescript , CSS library (Tailwind CSS) , Node.js (express),for backend , PostgreSQL (for database) , Redux (for state management) etc.
- **My Role :-** As the sole developer for the "Samaj" project, I managed both frontend and backend responsibilities. On the frontend, I designed and implemented the entire user interface, ensuring a seamless experience. For the backend, I focused on developing the event module, handling database design and integration. Additionally, I played a key role in bug identification and resolution across all modules, ensuring the overall stability and reliability of the application.
